PROFESSIONAL SUMMARY

Full-Stack Developer with hands-on experience building backend systems and web applications using React, TypeScript, Node.js, and MongoDB. Familiar with double-entry ledger design, transaction handling, RBAC workflows, audit logging, and payment integrations (Razorpay, HMAC-SHA256). Actively practising DSA with 300+ LeetCode problems solved.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, C++ **Frontend:** React.js, Redux Toolkit, HTML5, CSS3, Vite
Backend: Node.js, Express.js, REST APIs, JWT Auth, OAuth2 **Database:** MongoDB, Mongoose, MongoDB Atlas
Testing: Vitest, React Testing Library **DevOps:** Docker, AWS EC2, Vercel, Railway, Render, Cloudinary, Git, GitHub, Postman, pnpm

EXPERIENCE

Frontend Developer Intern, GKM IT, Udaipur

Sept 2025 – Mar 2026

- Worked on a Jira-like task management system using React + TypeScript, adding RBAC (2 roles), workflow state transitions, and audit logging to improve task tracking and team visibility.
- Built a full-stack blogging platform with JWT authentication, an admin dashboard, and Nodemailer-based notifications for moderation states (pending/approved/rejected).
- Designed reusable, controlled React components (selects, forms, modals) with debounced search and async pagination, cutting down redundant API calls and duplicate UI code.
- Improved MongoDB queries and added indexes on frequently hit endpoints to reduce API response times; deployed and managed applications on AWS EC2.
- Wrote unit and integration tests with Vitest and React Testing Library, and collaborated via GitHub pull requests and code review to catch regressions before production.

PROJECTS

SwiftCart | Full-Stack E-Commerce Platform

GitHub

React, Redux Toolkit, Node.js, Express, MongoDB, Razorpay, Cloudinary

- Managed global cart state with Redux Toolkit, persisted in local storage for a consistent cross-session experience.
- Integrated Razorpay for checkout with backend HMAC-SHA256 signature validation and OTP-based email verification to prevent payment tampering and fraudulent signups.
- Handled inventory updates on payment success, checking stock levels and updating counts as part of the same operation.
- Built an admin panel showing gross revenue, catalog items, and order counts.

Ledger System | Financial Ledger Backend

GitHub

Node.js, Express, MongoDB, Mongoose

- Implemented a double-entry bookkeeping system that computes balances by aggregating credit and debit records, with immutable posted entries.
- Used MongoDB sessions (`startTransaction`) with idempotency keys to roll back partial writes and prevent duplicate transaction processing on network retries.
- Added Gmail OAuth2 email notifications to alert users of ledger activity in real time.

Full-Stack Blog Platform | CMS with Moderation Workflow

GitHub

React, Vite, Node.js, Express, MongoDB, Mongoose, JWT, Nodemailer

- Built a full-stack blog with a secure client dashboard, JWT-based authentication middleware, and rich text editing.
- Automated Nodemailer notifications for pending, approved, and rejected post state changes across an admin moderation flow.

Jira Task Manager | Kanban Board & Workflow Engine

GitHub

React, TypeScript, Vite, pnpm

- Built a multi-project Kanban board with drag-and-drop and a client-side state machine for task transitions (todo → in-progress → review → done).
- Added project-level RBAC and audit logging so only admins can delete tasks or manage project members.

EDUCATION

B.E. Computer Science

2021 – 2025

Chandigarh University

ACHIEVEMENTS

- Solved **300+** problems on LeetCode and **150+** on CodeChef.
- NPTEL Certifications: Discrete Mathematics (IIT Ropar), Probability & Statistics (IIT Kharagpur).
