PROFESSIONAL SUMMARY

Full-Stack Developer with hands-on experience building backend systems and web applications using React, TypeScript, Node.js, and MongoDB. Familiar with double-entry ledger design, transaction handling, RBAC workflows, and payment integrations (Razorpay, HMAC-SHA256). Actively practising DSA with 300+ LeetCode problems solved.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, C++ **Frontend:** React.js, Redux Toolkit, HTML5, CSS3, Vite
Backend: Node.js, Express.js, REST APIs, JWT Auth, OAuth2 **Database:** MongoDB, Mongoose, MongoDB Atlas
Testing: Vitest, React Testing Library **DevOps:** AWS EC2, Render, Cloudinary, Git, GitHub, Postman, npm

EXPERIENCE

Frontend Developer Intern, GKM IT, Udaipur

Sept 2025 – Mar 2026

- Worked on a Jira-like task management system using React + TypeScript, adding RBAC (2 roles) and workflow state transitions to improve task tracking and team visibility.
- Built a full-stack blogging platform with JWT authentication, an admin dashboard, and Nodemailer-based notifications for moderation states (pending/approved/rejected).
- Improved MongoDB queries and added indexes on frequently hit endpoints to reduce API response times.
- Created a reusable React Select component with debounced search and async pagination to cut down redundant API calls.
- Wrote unit and integration tests using Vitest, which helped catch a few regression bugs during development.

PROJECTS

SwiftCart | Full-Stack E-Commerce Platform

GitHub

React, Redux Toolkit, Node.js, Express, MongoDB, Razorpay, Cloudinary

- Managed global cart state with Redux Toolkit, persisted in local storage for a consistent cross-session experience.
- Integrated Razorpay for checkout and added backend HMAC-SHA256 signature validation to prevent payment tampering.
- Handled inventory updates on payment success, checking stock levels and updating counts as part of the same operation.
- Built an admin panel showing gross revenue, catalog items, and order counts.

Ledger System | Financial Ledger Backend

GitHub

Node.js, Express, MongoDB, Mongoose

- Implemented a double-entry bookkeeping system that computes balances by aggregating credit and debit records.
- Used Mongoose validation hooks to prevent updates or deletions of posted ledger entries.
- Used MongoDB sessions (`startTransaction`) to roll back partial writes if a transaction fails midway.
- Added idempotency keys to avoid duplicate transaction processing on network retries.

Jira Task Manager | Kanban Board & Workflow Engine

GitHub

React, TypeScript, Vite, npm

- Built a multi-project Kanban board with drag-and-drop and a client-side state machine for task transitions (todo → in-progress → review → done).
- Added project-level RBAC so only admins can delete tasks or manage project members.

Notes API | REST API

GitHub

Node.js, Express, MongoDB Atlas, JWT, Render

- Built a multi-user REST API with full-text search, note sharing, and archiving — deployed live on Render.
- Secured endpoints with JWT auth and bcryptjs hashing, and added input validation with custom error-handling middleware.

EDUCATION

B.E. Computer Science

2021 – 2025

Chandigarh University

ACHIEVEMENTS

- Solved **300+** problems on LeetCode and **150+** on CodeChef.
- NPTEL Certifications: Discrete Mathematics (IIT Ropar), Probability & Statistics (IIT Kharagpur).
